- Web & Backend Development
- Cybersecurity & Forensics
- Linux (Ubuntu/Kali)
- Server Management (Tailscale)
- SEO & Database Management
- NestJS

Language

English

About Me

Highly motivated BSIT graduate with expertise in backend development, web technologies, and cybersecurity fundamentals. Proficient in Python (Flask), NestJS, and Linux-based systems, with experience developing secure and scalable applications. Demonstrates strong knowledge in network analysis, vulnerability assessment, and penetration testing concepts through CTF competitions and practical projects. Passionate about building reliable systems, improving application security, and contributing to innovative technology solutions. Seeking an entry-level developer or IT role to grow technical expertise and support secure system development.

Experience

December 2025 - March 2026
Department of Transportation (DOTr) Region 13

IT Intern / Developer

- Developed and deployed a Face Recognition Biometric System to streamline identity verification and secure access.
- Configured and managed remote server access using Ubuntu and Tailscale to ensure secure, cross-platform network connectivity for the biometric system.
- Gained hands-on experience deploying backend systems in a professional government IT environment.

October 2025
Department of Information and Communications Technology

Hack4Gov Cybersecurity Competitor – 9th Place Finisher

- Secured 9th place in the regional Hack4Gov cybersecurity hackathon, successfully tackling rigorous challenges in secure system practices and threat mitigation.
- Applied digital forensics, cryptography fundamentals, and network analysis tools to solve defensive strategy scenarios in a timed, competitive environment.
